Age / Gender	: 56 Yrs 3 Mth / MALE	Receipt Date	: 08-11-2024 15:37:01
Referred By	: DR.PRASHANT ATHALE	Reported on	: 09-11-2024 09:04:28
Transcribed By	:	Ward / Bed	: SW-518

ULTRASOUND EXAMINATION OF ABDOMEN & PELVIS (PORTABLE)

Findings:

Sub-optimal scan due to patient's uncooperation, poor breath hold and overlying bandages.

The Liver is moderately enlarged in size (19 cm) and shows a mild increase in parenchymal reflectivity. No focal lesion is seen. The Hepatic veins appear normal. There is no IHBR dilatation. The portal vein appears normal.

Minimal right sided pleural effusion.

A small (Vol : 40-50 cc) hypoechoic area with few internal septations is noted in perihepatic and subhepatic region – loculated/organised collection.

Another tiny (Vol : 1-2 cc) similar morphology collection noted in pelvis.

The gall bladder is contracted. Proximal C.B.D. is of normal caliber. Distal C.B.D. is obscured due to excessive bowel gases.

The head of pancreas is normal. Rest of the pancreas is obscured due to excessive bowel gases.

The spleen is normal size. It measures 10.4 cm in long axis. No focal lesion is seen.

Both kidneys are normal in position and size. They show slightly raised cortical reflectivity with maintained cortico-medullary distinction.

The Right Kidney measures 10.9 x 5.5 cm.

The Left Kidney measures 10.5 x 5.9 cm.

There is no evidence of obvious renal calculi, hydronephrosis, or mass noted.

The Urinary bladder is minimally distended with foley's bulb in situ.

The Prostate gland is not visualised due to empty urinary bladder.

IMPRESSION:

- Moderate hpatomegaly.
- Minimal right sided pleural effusion.
- A small (Vol : 40-50 cc) hypoechoic area with few internal septations in perihepatic and subhepatic region – loculated/organised collection. Another tiny (Vol : 1-2 cc) similar morphology collection in pelvis.
