

Patient Name	MR. KIRAN BHAGWAN TAWARE
Age / Gender	56 YEARS, 2 MONTHS / MALE
Ref. Consultant	DR.PRASHANT ATHALE
Ward/Bed No	SICU / SC010
IP Case No.	MGMIP2406720
Sample ID	MGM24149815

UHID	MGM240017131
Patient Case Type	IPD
Collection Date & Time	05-10-2024 17:58:28
Result Entry Date & Time	08-10-2024 19:22:55
Reported Date & Time	09-10-2024 19:16:38
Receipt Number	MGMWPR240089214

### HISTOPATHOLOGY REPORT

Specimen Number: HP-1314-24

Nature of Specimen: Appendix

Clinical History: Perforated appendix

**Gross findings:** Received one container labeled as 'appendix'.

Received a specimen of appendix measuring 6.5 cm in length along with separately sent mesoappendix measuring 5 cm x 3.5 cm x 1. The serosa is congested and fibrinopurulent exudates noted. No perforation identified. The tip is patent. The lumen contains soft faecal material. The wall has an average thickness of 0.2 cm to 0.4 cm. The periappendiceal soft tissue is yellow, focally congested. Part embedded.

A – Tip

B – Body

C – Body + mesoappendix

#### Microscopy findings:

H&E stained section studied show partially eroded mucosa with fibrinopurulent exudate on the surface. Lamina propria and muscularis propria shows mixed inflammatory infiltrate composed of polymorphs, lymphocytes, plasma cells and eosinophils. Prominent lymphoid follicles seen. Subserosal fat shows focal inflammatory infiltrate composed of neutrophils, lymphocytes and macrophages. No evidence of atypia / malignancy.

**Impression: Histomorphological features are suggestive of Acute appendicitis.**

*Note: 1.Specimen will be retained with us for 1month (in case part embedded) 2.Slides/Blocks will be retained for a period of 10 years.3.This report is a morphological diagnosis only based on H&E examination, IHC is required for definitive diagnosis/ subtyping of few lesions and may change subtype of few malignancies.4. For slide block retrieval contact on phone (022) 50666777 and inform us at least two days prior.*
