

NABH ACCREDITED

MGM NEW BOMBAY HOSPITAL, VASHI

Plot No. 35, Sector 3, Vashi, Navi Mumbai - 400703. Tel.: (022) 5066 6777

JCI ACCREDITED

RADIOLOGY DEPARTMENT

UHID	:	MGM16035596	Receipt No.	:	MGMWPR240088806
Patient Name	:	MRS. LALITA RAVINDRA LOKHANDE	Report No	:	MGMUSG240009197
Age / Gender	:	68 Yrs 2 Mth / FEMALE	Receipt Date	:	04-10-2024 15:09:02
Referred By	:	DR.K. RAJMOHAN	Reported on	:	05-10-2024 11:09:36
Transcribed By	:	SHARVARI	Ward / Bed	:	806

SONOGRAPHY OF ABDOMEN AND PELVIS (TAS)

LIVER is normal in size (15.5 cm) and shows **mild diffuse fatty infiltration**. Few small geographic area of focal fatty sparing is seen in the gall bladder fossa. No other appreciable focal lesion seen. Portal vein appears normal in caliber and shows normal hepato-petal flow. No dilated intrahepatic biliary radicles seen.

GALL BLADDER is partially distended and shows minimal diffuse wall thickening (measuring approximately 2.5 mm in maximum thickness). No obvious mobile calculi seen. Common bile duct is undilated (measures around 6 mm in maximum diameter) and shows minimal diffuse wall thickening (measuring approximately 2.2 mm in maximum thickness).

Visualized portion of **PANCREAS** (head and part of body) appears normal in size and shows normal parenchymal echotexture. Rest of the pancreas is obscured due to excessive bowel gases.

SPLEEN appears normal in size (10.7 cm). No appreciable focal lesion seen.

BOTH KIDNEYS

Both kidneys are normal in size, shape, position and parenchymal echogenicity with maintained cortico-medullary differentiation. No obvious calculi / hydronephrosis / hydroureter / perinephric fluid seen bilaterally.

Right kidney measures around 9.3 x 3.4 cm. **Few small right renal simple cortical cysts seen (largest measuring approximately 14 mm in diameter in its interpolar region).**

Left kidney measures around 11 x 4 cm.

URINARY BLADDER is partially distended and shows normal wall thickness. No obvious calculus, mass, diverticulum seen.

UTERUS is not visualised, consistent with post hysterectomy status.

Both ovaries are not visualized on TAS. However, no obvious pelvic mass seen on TAS.

Visualised bowel loops are undilated.
